

Pest Alert for 3RD Week of June 2020

- In overall cotton zone the climatic conditions and crop stage are conducive for flare up of various insect pests as also observed from the pest situation reports.
- Among sucking insect pests the hot spots of Jassid have increased during 2nd week of June which is expected to further increase during the next week.
- In case of bollworms the infestation of Pink bollworm and Armyworm has increased which may further flare up during next week.
- All the above mentioned pests are on higher ebb as compare to previous week and same corresponding week of previous year.
- All the field formations, extension workers and stakeholders are informed to remain vigilant during pest scouting and also guide the farmers for timely management of these insect pests to save the cotton crop from any economic loss.
